## Functions of the PDBP DMR

Extensible and scalable informatics platform for PDBP-relevant imaging, assessment, and genomics data

- Query within PDBP and across federated sites
- Analyze subjects across disparate studies
- Aggregate data

- Share data in a controlled, staged manner
- Assign permission groups and access control
- Receive attribution for submitted data

- Define unique data elements
- Review Common Data Elements (CDEs)
  - Export, manage, and group elements
    - Create and manage studies
    - Enroll patients
    - Schedule and collect patient data
    - Validate research data
    - Upload imaging, assessment, and genomics data
    - Contribute large datasets
